eBRIDGE Software Announces release of QuickBooks EDI Integration Solution for its SaaS platform

Utilizing eBridge OnDemand for integration via SaaS

BURLINGTON, Ontario, October 5, 2007 – As part of its continuing effort to provide the **SMB** market with integration functionality using SaaS (Software-as-a-Service), eBRIDGE Software is pleased to announce the release of its QuickBooks - EDI Integration Solution for use on the eBridge OnDemand platform.

eBridge OnDemand is a SaaS solution powered by Microsoft BizTalk Server 2006 R2 that provides automated data exchange and integration with back-office financial and enterprise systems. With eBridge OnDemand managing the B2B (Business to business) document exchange process between trading partners and QuickBooks, users are able to remotely track and view inbound and outbound documents along with compliancy and reconciliation status.

“eBridge OnDemand is the perfect vehicle for QuickBooks users to achieve their EDI needs,” stated Alex Stewart, VP of Operations at eBRIDGE Software. “The platform prevents the need to maintain traditional EDI components on-site while providing the tremendous benefits of integration, all through a cost effective SaaS interface.”

Supporting most QuickBooks 2007 versions, the eBridge EDI Integration solution automatically moves business data from inbound EDI documents, such as purchases orders, to the back-office QuickBooks software. In turn, this accurate information is then used to automatically create outbound EDI documents, such as ASN's and invoices.

Manual data entry is eliminated to prevent errors, save time, free up valuable resources, and improve accounts receivable cash flow. Costly chargebacks are eliminated and trading partner relationships are improved.

The EDI Integration Solution for QuickBooks is available from the eBridge eShop site at <http://www.ebridgesoft.com/eshop/index.php>

About eBridge Software

Founded in 1993, eBRIDGE Software specializes in delivering powerful solutions that streamline the flow of critical data between business applications and financial and enterprise systems. By providing accurate and timely exchange of data, eBRIDGE Software enables an organization to save time and money, increase efficiency and productivity, and improve its relationships with business partners.
