eBRIDGE Software Announces UIE Integration for Microsoft Dynamics GP 10.0 and Sage MAS 90 4.2

Universal Integration Support for Popular Financial Systems

BURLINGTON, Ontario, November 6, 2007 - eBRIDGE Software is excited to announce that its Universal Integration Engine (UIE) now supports integration for Microsoft Dynamics GP v10.0 and Sage MAS 90 v4.2.

The ability of the eBridge UIE to integrate business information with Dynamics GP v10.0 and MAS 90 v4.2 enables a wide range of business scenarios to be achieved for organizations that employ these systems. The UIE, by utilizing intelligent soft-coded scripts that leverage XML technology, revolutionizes the method in which data integration is obtained.

“The release of UIE adapters to support Dynamics GP and MAS 90 is on the heels of our success of integrating Dynamics AX,” stated Alex Stewart, VP of Operations at eBRIDGE Software. “eBridge recognizes the popularity of these systems in the SMB Market, and with universal integration capabilities provided through the UIE we are now able to automate more of the business processes for our customers by eliminating manual data entry and costly errors.”

The soft-coded intelligence behind the UIE’s design allows for the processing of XML documents that have been converted from specific data sets. The soft-coded scripts are written with user-friendly translations of XML schema elements, and these translations allow for straightforward script creation and modification by preventing the need to access the full complex XML schema structure.

The UIE, coupled with the eBridge OnDemand SaaS platform powered by Microsoft BizTalk Server R2, enables a much wider range of the SMB marketplace to access the same suite of B2B capabilities as major global players.

As a leading provider of the most extensive range of data integration solutions, eBridge is committed to applying today’s technology to support the latest financial system versions. As part of that commitment, a vast array of universal integration engine adapters is in process for completion over the next year.

About eBRIDGE Software

Founded in 1993, eBRIDGE Software specializes in delivering powerful solutions that streamline the flow of critical data between business applications and financial and enterprise systems. By providing accurate and timely exchange of data, eBRIDGE Software enables an organization to save time and money, increase efficiency and productivity, and improve its relationships with business partners.
