## **eBRIDGE Software Announces Launch of New Web Site**

### **Self-Service Environment the Focus of Redesigned Web Site**

**BURLINGTON, Ontario, September 6, 2007** - eBRIDGE Software is excited to announce that it has achieved another major step in providing SaaS (Software-as-a-Service) and user-driven integration functionality with the launch of its redesigned Web Site ([www.ebridgesoft.com](http://www.ebridgesoft.com))

With new features such as ePortal, eShop, and dedicated Support to enhance the user experience, the eBridge Web Site now functions as a self-service platform for end-users to achieve their data integration objectives.

With ePortal, users remotely access, track and integrate EDI documents using the eBridge OnDemand Software-as-a-Service (SaaS) solution. eBridge OnDemand enables an organization to achieve data integration utilizing the powerful processing features of Microsoft® BizTalk Server™ 2006 R2 and the revolutionary eBridge Universal Integration Engine (UIE) without the need for a traditional on-premise solution.

“One of the challenges we faced in providing a customer-centric SaaS platform was to do it in a way that didn’t impact our existing customers’ transactions,” stated Alex Stewart, VP of Operations at eBRIDGE Software. “We overcame this hurdle by adopting the BizTalk Server 2006 engine as our transactional platform, which allowed for a seamless transition for existing customers.”

In addition to ePortal, the eShop site lists the products and services available for purchase from eBRIDGE. As integration kits are developed for the UIE, eShop will be continually updated to offer the most extensive range of integration solutions to the SMB market at less cost than traditional methods.

“This is a giant step forward for eBRIDGE,” continued Mr. Stewart. “We now have the infrastructure in place to support future SaaS-based offerings for integration, and a vehicle to deliver these to our customers online.”

#### **About eBRIDGE Software**

Founded in 1993, eBRIDGE Software specializes in delivering powerful solutions that streamline the flow of critical data between business applications and financial and enterprise systems. By providing accurate and timely exchange of data, eBRIDGE Software enables an organization to save time and money, increase efficiency and productivity, and improve its relationships with business partners.
