eBRIDGE ePortal Achieves Milestone with over 25,000 Transactions

SaaS Solution Meets Success in Data Exchange and Delivery

BURLINGTON, Ontario, December 17, 2007 - eBRIDGE Software announced that its ePortal Software-as-a-Service (SaaS) platform has reached the impressive milestone of over 25,000 current transactions as of December 1, 2007.

ePortal was launched in September 2007 and follows the principles of Web 2.0 design, enabling a wider range of the SMB market to access B2B productivity benefits that were traditionally only available to major global players. ePortal, powered by BizTalk Server 2006 R2, provides customers with an efficient, simple and user-friendly web-based solution that handles data routing, transformation, communication and translator services.

“eBRIDGE is proud of the success of ePortal and of what our customers have been able to achieve,” stated Colin Brown, President and CEO of eBRIDGE Software. “Companies are relieved of a complex on-premise system yet still have the full benefits those systems provided; they can now view transactions in a web-friendly interface from any station that accesses the internet.”

Designed in the architecture of the Web 2.0 revolution, ePortal functions as an SaaS solution that enables customers to not only work remotely, but to customize their transaction platform to accommodate individual business requirements. User-driven enhancements can be implemented to improve and streamline work flow and usability.

Operating in conjunction with ePortal is the Universal Integration Engine (UIE), which connects to back-office financial systems to integrate and exchange data, thereby eliminating manual data entry and costly errors to further automate and streamline the e-commerce process.

“With data exchange provided by ePortal and integration provided by the UIE, valuable solutions are available to fit within specific business processes,” continued Mr. Brown. “eBRIDGE’s commitment is to continue to be a leading provider in applying the smartest technology to support the latest financial and business systems to deliver effective data exchange and integration solutions.”

About eBRIDGE Software

Founded in 1993, eBRIDGE Software specializes in delivering powerful solutions that streamline the flow of critical data between business applications and financial and enterprise systems. By providing accurate and timely exchange of data, eBRIDGE Software enables an organization to save time and money, increase efficiency and productivity, and improve its relationships with business partners.
