

EBRIDGE SOFTWARE EPORTAL LEVERAGES SAAS MODEL FOR RAPID DEPLOYMENT OF OVERSTOCK.COM EDI DOCUMENTS WITH CLIENT

Leveraging Its Software As A Service Model (SaaS), eBridge ePortal Allows For Quick And Easy Integration of Overstock.com EDI documents With Client.

BURLINGTON, Ontario (December 10, 2008) – eBRIDGE Software, the leader in business software integration solutions, is pleased to announce that it has built connection adaptors for a client exchanging EDI documents with Overstock.com and received portal testing certification in less than one week as a result of leveraging its software as a service (SaaS) model.

When a client began doing business with Overstock.com they were required to use EDI (X.12) to transact their sales orders. They wanted a provider that could implement a system fast and with a quick turn around time in order to integrate with Overstock.com as well as their web store, eBay and Amazon. The eBridge ePortal Engine gave them exactly that. In under a week, compliance with Overstock.com EDI documents was met and sending and receiving of documents was enabled in time for the holiday season.

Having the ePortal as a web-based software as a service (SaaS) solution ensured that the client could be up and running on the system in days and not months. Typically, testing with Overstock.com prior to going “live” with their orders is a challenging process. eBRIDGE was able to set a new standard in passing quality control testing with Overstock.com and had the client pass QC testing in under a week. “With our web-based ePortal technology, customers can instantly connect to a set of preconfigured connections like Overstock, eBay, Amazon and a hundreds of others” mentions Alex Stewart, VP of Operations at eBridge. “This technology represents the next generation of business to business (B2B) and business to consumer technology that meets both legacy requirements such as EDI while enabling the newer web based technologies.”

About ePortal

The ePortal Software-as-a-Service (SaaS) platform has been proven a powerful business integration engine in the small to medium sized business (SMB) market, with its ease of use and short setup time required for vendors to implement. ePortal was designed with Web 2.0 architecture in mind and so, provides the ability to view inbound and outbound documents in a user-friendly format from any remote station that has access to the internet. Web-friendly interface forms are used to enter data for outbound documents, which are then sent to the trading partner in the required EDI format. Our ePortal software as a service solution uses flexible and soft-coded XML technology as well as support for numerous EDI formats (ANSI X12, EDIFACT, etc.), resulting in an independent and flexible Integration Solution that effectively integrates with your financial system while meeting your company’s unique internal business processes.

About eBRIDGE Software

eBRIDGE Software, founded in 1993, leads the small medium enterprise (SME) market in accounting software integration. Our powerful combination of Integration-as-a-Service (IaaS) ePortal—including over 250 predefined connectors, such as EDI, ecommerce, CRM, and warehouse management—and our eBRIDGE adapters for over 37 accounting packages, makes eBRIDGE Software the only last mile integration-as-a-service company to offer the widest range of integration possibilities in the market today. This complete and flexible integration solution streamlines your business processes, saving you time and money. For more information visit www.ebridgesoft.com.
