

eBRIDGE SAAS ePortal Reaches Milestone of 1,000,000 Transactions

The eBridge web-based business transaction ePortal has processed over 1 million business documents.

BURLINGTON, Ontario (May 11, 2009) – eBRIDGE Software announced today that its powerful ePortal platform continues to lead in the SMB integration market by reaching the milestone of 1,000,000 active and concurrent transactions in less than a year.

With its unique model of hundreds of pre-configured connections and the only ubiquitous end-to-end integration solution, the eBridge ePortal continues to be a leader of technology integration in the SMB space. Using next generation .NET components, the ePortal continues to process documents faster and keep up with the increasing demand of the thousands of transactions that cross the eBRIDGE ePortal daily. Transactions average well under a minute to traverse ePortal while undergoing transformations, validations and translations into a vast number of different standards and document types.

ePortal, powered by Microsoft's BizTalk Server 2006 R2, connects a business to its customers, external business systems (Webstore, CRM, SCM, etc.) and EDI trading partners to allow for fully integrated and online management of business transactions using a web-friendly interface.

"With the continued focus on timely transaction performance, our ePortal engine can easily handle the ever-increasing volume of business documents being transacted." said Alex Stewart, VP Operations of eBRIDGE.

With an architectural design based on the Web 2.0 revolution, ePortal provides the ability to manage transactions in a user-friendly format not just from on-premises, but from anywhere in the world with Internet access. Web-friendly interface forms are used to enter data for manual transactions, which are then sent to business partners or integrated into the ERP/Accounting system.

"Our customers need to focus on their primary business, so having the eBRIDGE ePortal solution take care of the integration of their various external business channels just makes sense," said Mr. Stewart. "With the second generation of ePortal enhancements, combined with the next generation of capabilities from Web stores, CRM systems and on-line business tools, the ePortal is set to provide all the capabilities of traditional Value-Added Network providers."

About eBridge

eBridge Software, founded in 1993, leads the small to medium sized (SME) market in accounting software integration. Our powerful combination of Integration-as-a-Service (IaaS) ePortal – including over 250 predefined connectors for EDI, ecommerce, CRM, and warehouse management—and our eBRIDGE adapters with over 35+ accounting packages, makes eBRIDGE Software the only last mile integration-as-a-service company to offer the widest range of integration possibilities in the market
